

instrumentation add on for Rebel logger

Easy set up and configuration

H Box

The H Box extends the capability of the Rebel data loggers by providing a fast and convenient method of integrating sensor data with CAN data.

Together with the Rebel data logger instrumentation module the H-Box can acquire sensor data from accelerometers, pressure sensors, temperature sensors etc...

Features

- Connects directly to the Rebel instrumentation port.
- Automatic sleep control via data logger command.
- Power LED indicator.
- Convenient output voltage source for sensor supply.

Analogue channels

- 7 inputs with (+/-) 20 Volt range
- Resolution approx 5 mVolt
- All channels can be sampled every 5 mSec.

Thermocouple channels

- 8 K-type or T-type thermocouple inputs
- Measurement range -200°C to 1250°C.
- Typical accuracy +/- 1°C.

All channels sampled every 250 mSec
