

data logger management with global connectivity

streamlog

Streamlog is a global data logger management system which enables you to keep in touch with your data remotely via wireless technology.

Worldwide data logger and fleet management

- Assign Rebel data loggers, vehicles/equipment, engineers and administrators within multiple projects.
- Apply filters by date, vehicle/equipment, trigger events or data logger.
- Configure automatic reports by email.
- Track location via GPS.

Secure central server

- No infrastructure required to get started.
- Data collation is in one central environment for access anywhere when required.
- Data files are automatically stored and backed up.

Remote access

- Via GPRS for worldwide connectivity.
- Monitor data loggers.
- Retrieve recorded data files from loggers in the field.
- Reconfigure any data loggers remotely.

Data streaming

- Continuous transmission of key parameters to the server.
- Live monitoring of parameters and location.
- Immediate review of data and triggered events.
